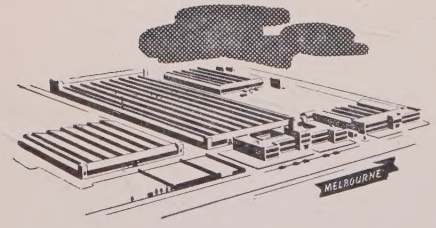
A Forecast..

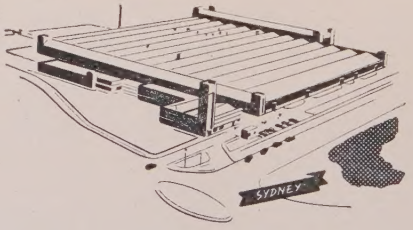
During nearly six years of intense war production and in the fulfilment of 500 war projects, many never previously manufactured in Australia, General Motors-Holden's have learned much of volume production to high standards of precision.

Factories, enlarged to cope with war demands, now aggregate 100 acres of floor space. They are complete with most modern machine tools and testing and measuring equipment of fantastic precision. More important still, a force of Australian engineers and production men has been created to play a decisive part in Australia's future.

Tasks ahead are to maintain employment at the highest possible level, and to hasten the production of urgently needed motor vehicles of all types.

Meanwhile, a special group of G.M.H. engineers is concentrating on the design and production of the completely Australian manufactured car. With all the resources and technical skill of General Motors to draw upon, the Company is confident that this new car will be in every way a credit to Australian industry.





also plants at:
Brisbane and Perth.

Are you ready—

to Reap Your Full Harvest of Peace-Time Spending?

Primary industries throughout the Commonwealth are enjoying a period of prosperity unequalled for well over a decade. Now that war restrictions are being eased the farming community will, like all other sections, be eager to purchase all those things that have been denied us during the tragic days of war.

"The Journal of Agriculture of W.A."

circulates throughout the whole farming community of the State, and is therefore an ideal advertising medium for all farmers' needs — personal and otherwise.

For full advertising particulars, apply direct to——

"SHELL TELLS." : *No. 7 of a Series.*

"TEEPOL" is another SHELL development

The astonished duck sank!

● The duck (a real duck—this actually occurred) sank because Teepol had removed the oil from its feathers. When that happened, the duck was no longer capable of floating.

What *is* Teepol? It is a wetting agent — a detergent—a synthetic soap, produced by Shell from petroleum . . . and its use instead of the old kinds of soap during the war saved millions of pounds of fats that Britain vitally needed for other purposes.

Teepol's amazing cleansing powers are exerted equally well in soft, hard, and even sea water. It is a valuable material in industry, in which its uses are innumerable.

Shell's leadership in petroleum research and technology, of which Teepol is just another result, is your assurance of finer fuels and lubricants for your car — soon !

You can be sure of SHELL

Use SHELL Motor Oil—*It's 'Drag-free'*

SHELL Research in the Orchard

You will find Shell Research men out on the land year after year, accumulating new data on the life and habits of all pests that attack trees, blossom or fruit, and experimenting to improve ways of destroying the pests.

Further, you will find fully equipped Shell laboratories in capital cities, with specialised equipment for carrying the field scientists' researches still further.

Finally, in Shell plants and refineries you will find additional scientists who make sure that every improvement perfected by the field and laboratory scientists comes to you in Shell Spraying Oils—*to improve the quality and quantity of your harvest.*
